

International Graduate Conference on Climate Change and People

(With a Focus on Greater South Asia from Kyrgyzstan to Bangladesh)

15-19 November 2010, Kathmandu, NEPAL

The projected impacts of climate change - many of which are potentially irreversible - will affect everyone on the Earth. The deterioration of the earth's ecosystems will jeopardize human health; precipitation patterns; water and food supplies; energy supplies; and the integrity of natural systems. Calling for unified global action against climate change, The Small Earth Nepal and the Consortium for Capacity Building (University of Colorado) are organizing a regionally-focused International Graduate Conference on Climate Change and People. The event is set in collaboration with the Department of Hydrology and Meteorology, Government of Nepal; the Centre of Research for Environment Energy and Water (Nepal), the Asian Institute of Technology (Thailand) and the International Research Center for River Basin Environment, University of Yamanashi (Japan). The goal of the conference is to bring together various scholars, graduate students and climate change practitioners to equip and mobilize Young Minds on climate change and related societal issues. The conference is supported by Asia Pacific Network for Global Change Research (APN) under the CAPaBLE Program. The conference is also co-sponsored by UNESCO. Additional sponsors are welcome to join.

The conference is mainly focused on the multidisciplinary capacity building of graduate students and scientists in various disciplines. The event will feature the sharing of knowledge and experience by experts and participants on "Climate Affairs", from climate-related science to impacts to policy & economics to ethics & equity. Climate Affairs is a concept which aims to enhance the "eco-generation" of climate leaders and climate agents in their respective academic and practical areas of concern.

The Conference activities concentrate to provide the following:

- To build the awareness and scientific capacity of young students from multiple disciplines while fostering and enhancing networks for sustainable development options in the region.
- To equip graduate students with usable knowledge on the importance of multidisciplinary activities in addressing climate change, regardless of their home academic discipline.
- To enable participants to formulate a multinational networking group to develop baseline skills needed to understand climate change mitigation, adaptation and prevention measures.
- To create awareness among community and social leaders for identifying their roles in effective ways to combat the influences of a changing climate.

How to Apply? Apply by email with letter of interest and detailed CV. Interested undergraduates may also inquire about the conference by email.

Deadline for the Submission of Application is due on 15 September 2010.

Selection of Participants: Expression Email or Letter of Interest and Commitment Level.

Registration Fees: US\$ 100 for SAARC Country citizens and participants from other developing countries from Greater South Asia (e.g., Central and Southwest Asia to Bangladesh). For participants from developed countries in Asia-Pacific and beyond, the fee is US\$ 150.

Funding: Partial or full funding may be available to the selected participants from developing countries.
